CONTENTS

Professor Per Ekwall vii
A technique to estimate the apparent surface pressure of emulsion particles using apolipoproteins as probes
D.H. Small (Boston, MA, USA) and M. Phillips (Philadelphia, PA, USA) 1
Diffusion-influenced deactivation processes in the study of surfactant aggregates
M. Almgren (Uppsala, Sweden) 9
Comments on the relation between osmotic stress and surface force measurements
J.C. Eriksson and S. Ljunggren (Stockholm, Sweden) 33
Amphiphilic association structures: some recent applications
S.E. Friberg and Zhuning Ma (Potsdam, NY, USA) 45
The role of swelling methods in surfactant phase science: past, present and future
R.G. Laughlin (Cincinnati, OH, USA) 57
Characteristic property in aqueous solutions: effect of iceberg formation of water surrounding solute on the solubility (or cmc) and its peculiar temperature dependence
K. Shinoda (Yokohama, Japan) 81
Nonlamellar phases formed by membrane lipids
G. Lindblom and L. Rilfors (Umeå, Sweden) 101
Some aspects on the cubic phases in surfactant and surfactant-like lipid systems
K. Fontell (Lund, Sweden) 127
Association and segregation in aqueous polymer/polymer, polymer/surfactant, and surfactant/surfactant mixtures: similarities and differences
L. Piculell and B. Lindman (Lund, Sweden) 149
Surface excitations involving headgroup conformations and molecular protrusions. A Monte Carlo study of surface forces
U. Nilsson, B. Jönsson and H. Wennerström (Lund, Sweden) 179
The structure and properties of medium-chain surfactant solutions: a case study of sodium octanoate
J.B. Rosenholm (Åbo, Turku, Finland) 197
Stabilization and destabilization of water-in-crude oil emulsions from the Norwegian Continental Shelf. Correlation with model systems
J. Sjöblom, O. Urdahl, K.G. Nordli Børve, Li Mingyuan, J.O. Saeten, A.A. Christy and Tiren Gu (Bergen, Norway) 241
